

AHU & LAN CONTROLLER REPAIR SERVICES

JTD Electronics Limited operates within the Telecommunications, Rail and Transportation, Utilities, Oil & Gas and Solar Energy markets. From our UK base we regularly support repeat customers in the US, most of Europe, the Middle East and the Channel Islands. Amongst our customers are some of the UKs biggest blue-chip household names.

We refurbish, repair and supply AHU & LAN Controllers used within the Automation and HVAC Industries and their supporting environments. We specialise in legacy and current systems from all leading OEMs such as Satchwell, Schneider and Trend, to name but a few. All of our tests include full communication testing will relevant software and systems.

Finding solutions to minimise your power disruption before it occurs is our strength. As well as increasing uptime, our planned refurbishment programs are an effective method of extending the life of your existing systems, and completely remove the significant disruption and expense involved in replacing them with new kit. For those unplanned catastrophic failures, our same day despatch swap-out service will have your system fully operational in next to no time. The standard repair offering is a time proven method of supporting the normal operation of your facilities.

Our ethos of providing customer delight through developing long term partnerships is underpinned by our, MOD accreditation.
